The United States Department of Energy Clean Cities program provides trusted Alternative Fuel resources and produces tools that are used nationwide by the private sector, public agencies, and coalitions that operate at the regional and local level. These local coalitions leverage education and funding program resources to transform transportation in communities, reducing air pollution and greenhouse gases from the transportation sector and working to continue the vital services of transit, goods movement, municipal duties, agricultural operations, and personal vehicle travel.

San Joaquin Valley Clean Cities Coalition, CA

This program exemplifies clean air, jobs, and energy security by providing clean transportation options.

St. Louis Clean Cities

Authorization is needed to provide certainty of continuation of this critical program. Our local industry and other stakeholders need certainty that relationships and projects will be ongoing.

Clean Fuels Ohio

U.S. Congressman A. Donald
McEACHIN

Clean Cities provides critical support to fleets and transportation professionals by expanding fuel and power-train options. Our Coalition creates opportunities and education to underrepresented urban and rural populations specific to non-traditional transportation fuels. This effort benefits our State by offering cost-saving transportation alternatives and up-to-date technical information.

Land of Enchantment Clean Cities Coalition, NM

Authorization of the Clean Cities program will provide the stability needed for Lone Star Clean Fuels Alliance to expand our good work using Texas energy resources to leverage significant private funds to develop a strong and robust, cost effective, technology and fuel-savvy transportation sector.

Lone Star Clean Fuels Alliance TX

Northern Colorado Clean Cities (NCCC) and its stakeholders are requesting to support the Clean Cities program authorization. Across the United States, the Clean Cities program has been instrumental in the development of sustainable transportation fuels and technologies. Northern Colorado Clean Cities represents over 20 municipalities, 30 transportation stakeholders and 1000+ communities members across Colorado and growing. Implementing alternative fuels, fuel-saving technologies and practices, for over 25 years and counting. The authorization of the program will ensure the development of unbiased and objective information resources covering alternative fuels, advanced vehicles, new mobility choices, and other strategies that improve transportation efficiency and reduce costs.

Northern Colorado Clean Cities

The Valley of the Sun Clean Cities Coalition fully supports legislation to authorize funding for the Clean Cities organizations.

Valley of the Sun Clean Cities, AZ

As a DOE-sponsored program for over 25 years, Clean Cities has a proven track record of bringing in more than \$10 in matching fund for every dollar invested and has played a crucial role in displacing petroleum consumption and contributed greatly to our nation's energy and economic security. Congressional Authorization will help ensure this key program continues the important missions of expanding the use of domestically produced clean energy and fuels, enabling domestic production of clean transportation vehicles and infrastructure, and reducing greenhouse gas emissions- well into the future.

East Bay Clean Cities Coalition (Oakland, CA)

U.S. Congressman A. Donald
McEACHIN

I support authorization of the Clean Cities program. Clean Cities' efforts in Michigan since the late 1990s has helped address the national priorities of energy, environmental, and economic security through fuel economy and alternative fuel and vehicle market growth. With carbon neutrality a critical focus for the United States, the work of Clean Cities coalitions is more important than ever to advancing national priorities through local projects, education, and outreach. Michigan Clean Cities is proud to be a part of the solution.

Michigan Clean Cities

The network of Clean Cities coalitions is key to the success of clean fleets across the country. Whether it is alternative fuel heavy-duty trucks and buses or electric bicycles, the Clean Cities coalitions care connected in their communities and effective in promoting the use of cleaner technology, improving local air quality, and engaging communities in equitable ways. This legislation will allow the Colorado coalition to leverage partnerships and tools at the national level for the benefit of our home state.

Drive Clean Colorado

Clean Cities Coalitions are critical for advancing cleaner air in our local communities that promote health, well being, and boost economies through local tourism, attracting a talented work-force, and less missed days from work due to respiratory illnesses or other health impacts caused by air pollution.

Virginia Clean Cities - Roanoke Office

Nothing matches the unbiased work that the U.S. DOE Clean Cities Program does – and more specifically the coalitions do – in terms of community outreach and education on alternative fuel vehicles. Direct fleet interaction; community meetings, workshops and training programs; connecting industry and fleets... it's all in days work for a Clean Cities coalition.

East Tennessee Clean Fuels
